SKILLS SUMMARY

Analisis Data Pemulihan Aset (Kejaksaan Agung)

June 2025 - Present

Fullstack Programmer (Freelance)

is an application for:

1. Building an integrated web-based information system to support comprehensive asset management, including asset identification and categorization, tracking, maintenance, monitoring, etc.
2. Providing dashboards and reporting for data-driven decision-making.
3. Reducing the risk of asset loss or mismanagement in record keeping.

The modules developed are:

- a. Asset Registration & Cataloging Module
- b. Asset Distribution Map Module
- c. Asset Maintenance Management Module
- d. Asset Valuation Module
- e. Asset Condition Monitoring Module
- f. Asset Log & History Module
- g. Dashboard & Report Module
- h. Security & Access Control Module
- i. Notification and Alert Module
- j. QR Code Module
- k. Comparison & Analysis Module
- l. Role
- m. User Management
 - using a NextJS frontend, a Golang GIN backend, a PostgreSQL database, CI/CD automation, and Docker.

<https://dev-free.sysdev.id>**ICP (BNPT)**

Aug 2024 - Present

Project Manager (Freelance)

build using go gin, reactjs, postgresql, docker, minio for storage bucket, react native, ci/cd

applications are used for :

- ease of organization managing tasks and projects.
- ease of organization to determine who task participants are
- ease of determining task priorities
- ease of task division
- short communication
- ease of monitoring work reports

with several features :

- dashboard & feeds
- tasks & projects
- document colaboration such as google office, microsoft office
- company structure
- webmail
- chat & calls
- private channel
- calendar
- meeting room
- my drive
- log activity

Peruri Digital Signing (PERURI)

Nov 2022 - Aug 2023

Fullstack Programmer (Freelance)

Build using laravel, docker, ci/cd, postgresql
POS

Was created to facilitate the activity of using digital products that have been distributed by strategic partners. So that the use of this digital product smoothly, then this application made based on the following assumptions.

- Peruri fulfills the demand for IT infrastructure for application development needs POS portal
- This POS portal will be the main recommendation in signing and digital stamp
- Peruri supports PDS in fulfilling electronic system legal compliance

SCM

The SCM system was created to facilitate the needs of partners such as: facilitating the activity of allocating digital product quotas which are distributed to strategic partners, facilitating the activity of allocating digital product quotas which are distributed to strategic partners and facilitating strategic partners who wish to become partners of PDS, to be able to register by uploading required documents and support PDS to be able to select Partners by examining documents uploaded by Partners. So that the application is as expected, , the application is made based on the following assumptions :

1. Peruri facilitates meeting activities with telkom sigma in the process of gathering information related to the SCM system.
2. Peruri fulfills IT infrastructure demands for SCM system needs.
3. This SCM system will be the main reference in viewing and monitoring actual quotas.
4. Peruri supports PDS in fulfilling electronic system legal compliance.
5. Peruri facilitates meeting activities with telkom sigma in the process of gathering information related to the SCM system
6. Peruri fulfills IT infrastructure demands for SCM system needs
7. This SCM system will be the main reference in viewing and monitoring actual quotas
8. The Legal, Partnership and Sales teams can take their time to conduct requirements gathering with the developer team for data collection needs.
9. Partners can enter the system by first registering an account and getting account verification via email.

Smartkantin (Graha Yasa Selaras)

Dec 2023 - Feb 2023

Fullstack Programmer (Freelance)

build using golang gin, laravel, bootstrap, postgresql,
react native, docker, ci/cd

The smart kantin application was created to facilitate canteen umkm in the telkom dormitory environment. By using the application, sellers and students don't have to bother placing orders, delivering food.

Using Golang Technology for API, Laravel for the web, react native for Android and iOS, PostgreSQL for databases, dockers, alibaba servers using ECS, webmail for booking notifications and password changes, Midtrans for Payment Gateway, Zenviva for Send Code of Activation , Google Cloud Storage for File Manager, Firebase for Push Notification, New Relic for Monitoring Server, and Certbot for SSL certificates

<https://smartkantin.com>

Donut Genic

Jun 2022 - Jun 2022

Fullstack Programmer (Freelance)

Build using laravel, bootstrap, mysql, cpanel

This application has several features such as:

- dynamic dashboard settings
- system administrator leveling
- setting master data for dynamic public display
- sales transactions
- sales report

Nesiatix

Jun 2022 - Jun 2022

Fullstack Programmer (Freelance)

Build using golang, postgresql, laravel, bootstrap application for online ticketing sales. created using: dashboard + online ticketing (laravel framework), API (Golang), Database (Postgresql), Nginx server on almalinux operating system.

Pasteur Trans Web Ticketing

Dec 2020 - Mar 2021

Fullstack Programmer (Freelance)

Build using laravel, mysql, bootstrap

is an online ticket booking application and company profile website. Integrated with traveloka and redbus, as for the menus of this application:

- login according to user access rights from each outlet
- outlet setting
- seat map settings
- vehicle settings
- travel schedule arrangement
- Main website settings (company profile) such as promotions, services, about companies, etc.
- online and offline ordering at outlets
- data integration with traveloka and redbus for ordering

- reports (processes, customers, PNBP, tools, testers, testing)
- administrator (menu, user system level, admin, application configuration)

Locate (Brickston Singapore)

Apr 2020 - Jul 2020

Assistant Project Manager (Coding Collective)

Brickston Coach is a well established bus company that strives to deliver quality coach services to their clients. One such service is ferrying their clients' employees; by providing punctual bus transportation to fetch them to and fro their workplace safely.

THE ROADBLOCK

Currently, Brickstone Coach is using WhatsApp Group Chat as a platform to communicate with these employees on the status of each bus route. For, e.g.

"Company A – MRT to Work Route" Group Chat,
"Company B – Work to MRT Route" Group Chat,
"Company C – Lunch Shuttle Route" Group Chat.

Whenever there is a delay in any bus departure timing, Brickston Coach will manually post the updates via the relevant WhatsApp Group Chat to broadcast to the affected employees with regards to the next expected arrival timing and bus number.

THE GOAL

The overarching requirement for Brickston Coach is to improve bus communications with their clients' employees using an automated mobile application; and with this tech solution, to expand their credibility as a professional coach services company to potential new clientele.

PAVING THE WAY FORWARD

To this extent and beyond, Tech+Art is offering solutions to allow Brickston Coach to:

1. Efficiently manage bus route assignments via an online CMS dashboard, which will then allow their clients' employees to monitor bus route status and real time location via a mobile application.
2. Allow sub contract drivers to easily login to the mobile application and start taking over the bus routes assigned by Brickston Coach.
3. Allow employees to be notified of any changes in "starred" bus routes via In-App Notifications.
4. To allow Brickston Coach Administrator to be notified of sub contract drivers who have yet to log in to the system (so as to broadcast their GPS location) ahead of their scheduled/assigned routes.

<https://www.brickston.com.sg/locateapp/login>

CITRACKER (Agency for Integrated Care Singapore)

Apr 2020 - Jul 2020

Assistant Project Manager (Coding Collective)**1. Main Administrator**

a. There is only 1 Main Administrator in the CI Tracker Module. He is able to log in via email and password.

Once inside he can do the following:

- b. View, Edit Main Administrator Profile – First Name, Last Name, Email Address, Password Reset
- c. View, Add, Edit, Remove Division Leader Profile – First Name, Last Name, Email Address, Password Reset

Sistem Informasi Kawasan Pertanian

Dec 2018 - Jan 2018

Fullstack Programmer (Freelance)

The Agricultural Region Planning Information System, hereinafter abbreviated as SIKP, is a page that contains information about tabular and spatial data on agricultural areas. SIKP contains data and information collected from the database in the e-Proposal application.

The development of SIKP is a form of follow-up from the Minister of Agriculture Regulation No. 41 / Permentan / OT.140 / 3/2014 concerning Guidelines for Agricultural Development Planning Based on e-Planning. SIKP displays spatial data and tabular data on agricultural areas managed in the form of websites. Tabular data is presented in the form of a statistical table that displays the results of the comparison between existing data and potential data.

SIKP contains data and information collected from the database in the e-proposal application. The e-proposal is a web-based annual planning information system that is intended to facilitate the proposal of programs, activities, and the state budget of the Ministry of Agriculture of all Regional Work Units that carry out agricultural affairs in the provinces / districts / cities and Work Units within the Ministry of Agriculture in the Center and Region.

The SIKP design is structured in such a way that it runs interactively with the e-Proposal application. SIKP and e-Proposal are part of e-Planning. SIKP is dynamic and always updated data referring to the data base in e-Proposal which is updated annually. The data base in e-Proposal will be transferred into the SIKP and then the tabular and spatial data contained in the SIKP will be used as material to be analyzed and the plans will be proposed in the e-Proposal.

Walet Healthy Care

Sep 2018 - Nov 2018

Fullstack Programmer (Freelance)

is an application used to market spa products and reservations. made using laravel version 5.6.38 and mysql. module consists of:

- multilingual
- about Us
- management of content management from the admin
- spa services
- product
- reservation
- contact us
- FAQ
- partnership
- gallery

SMKI Yogyakarta

Jul 2018 - Sep 2018

Fullstack Programmer (Freelance)

Smki Yogyakarta website is a web-based application that is used as a publication media to introduce about Yogyakarta Junior High School. as for the modules used:
